

FABRICATED MANHOLE SPIGOTS

The combination of Iplex's extensive product range and PE Fabrication capabilities enables us to deliver a total solution to our customers.

Project Overview

With in-house fabrication capabilities, Iplex can provide a total solution for any project size.

The Iplex team supplied a project for a greenfield site; new gravity and rising sewer main and a pump station. This project featured a large range of Iplex products including POLIplex® PE100 pipe and fittings, Irontite® Ductile Iron pipe and Crevet® Ductile Iron fittings and FLOWTITE® GRP pipe and fittings.

Manhole spigots were a major requirement for the connection to the chamber structures within the project. The Iplex fabrication team were able to provide these in size DN710, DN900 and DN1000 in 1.5m lengths.

The complete project was delivered on time, with quality fabricated products.
